

Edelweiss

Automated data analysis and plotting

Evaluating experimental data from several different sources can be a chore. Instead of using home-built scripts or endless Excel spreadsheets, Edelweiss makes it easy to explore, analyze, and plot your data.

Shared interactive plots

- Export plots as images or interactive html files.
- Share reports with interactive plots, data, text, images, etc.

- Anyone you share it with can zoom, select traces, pick data points, and more.

Flexible data loading

- Load raw data from a variety of sources with different formats: Text data, CSV, EC-lab, Excel, etc.

- Automatically detect the identity and unit of each table column.
- Perform unit conversions and other data treatment

Automate common workflows

- Save workflows that you perform often to avoid repetitive work.
- Editing previous actions automatically updates all following actions.

- Built-in functions for analysis of experimental data, such as synchronizing data from different devices
